What is Bioinformatics?

Bioinformatics is an interdisciplinary field that develops and applies computational methods to analyze large collections of biological data, such as genetic sequences, cell populations or protein samples, to make new predictions or discover new biology. The computational methods used include analytical methods, mathematical modelling and simulation.

Source: Towards Data Science (Medium)
<https://towardsdatascience.com/what-is-bioinformatics-703170763999>

Draws from numerous fields:

- Molecular biology
- Programming
- Computer science
- Statistics

Spans various disciplines

- **Genomics** ----->
- Proteomics
- Metabolomics
- Structural Bioinformatics

Sequencer DNA/RNA

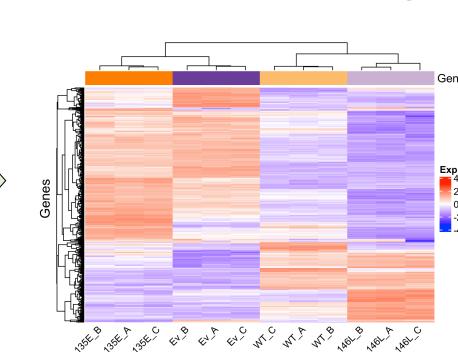

Typical run generates 100s of millions of reads in FASTQ format

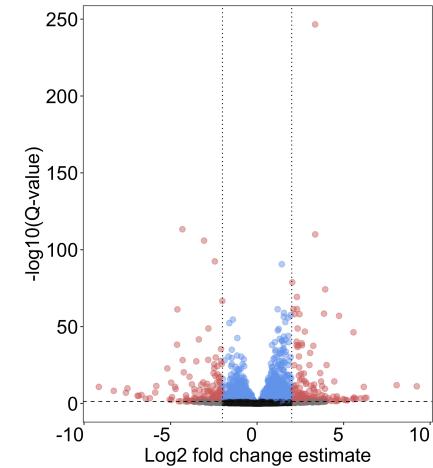

Biological insights

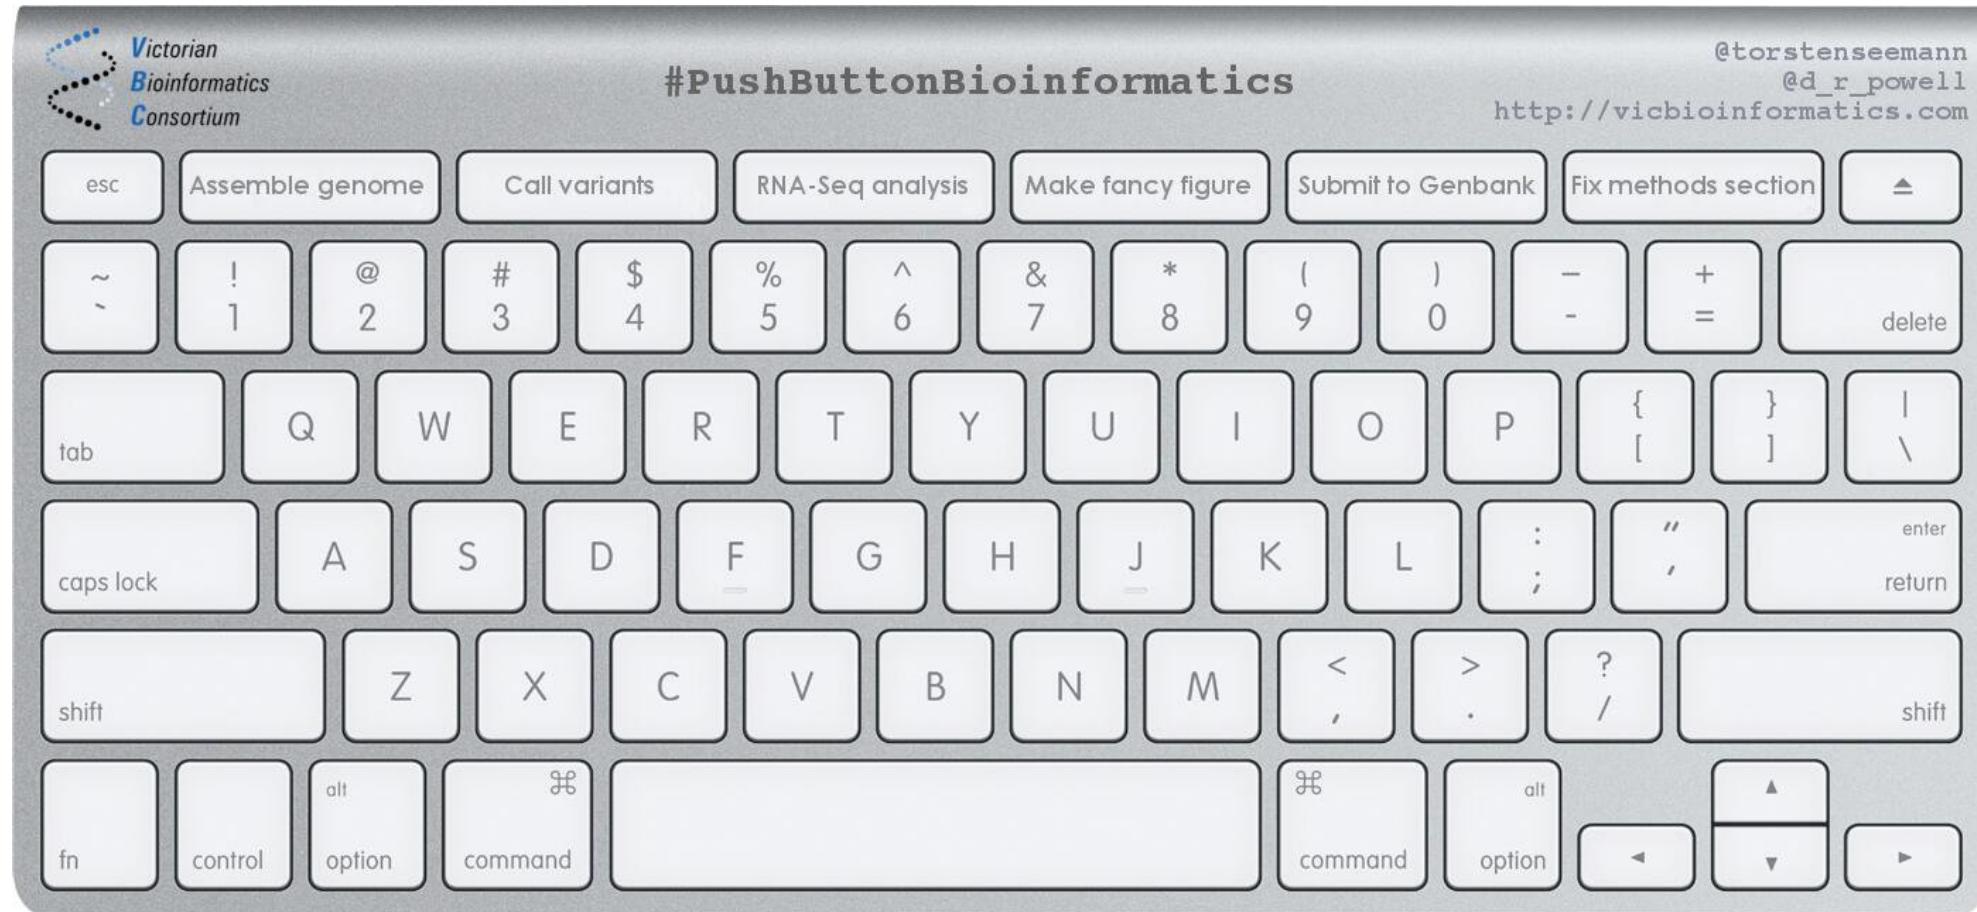

Hierarchical clustering

Differential expression

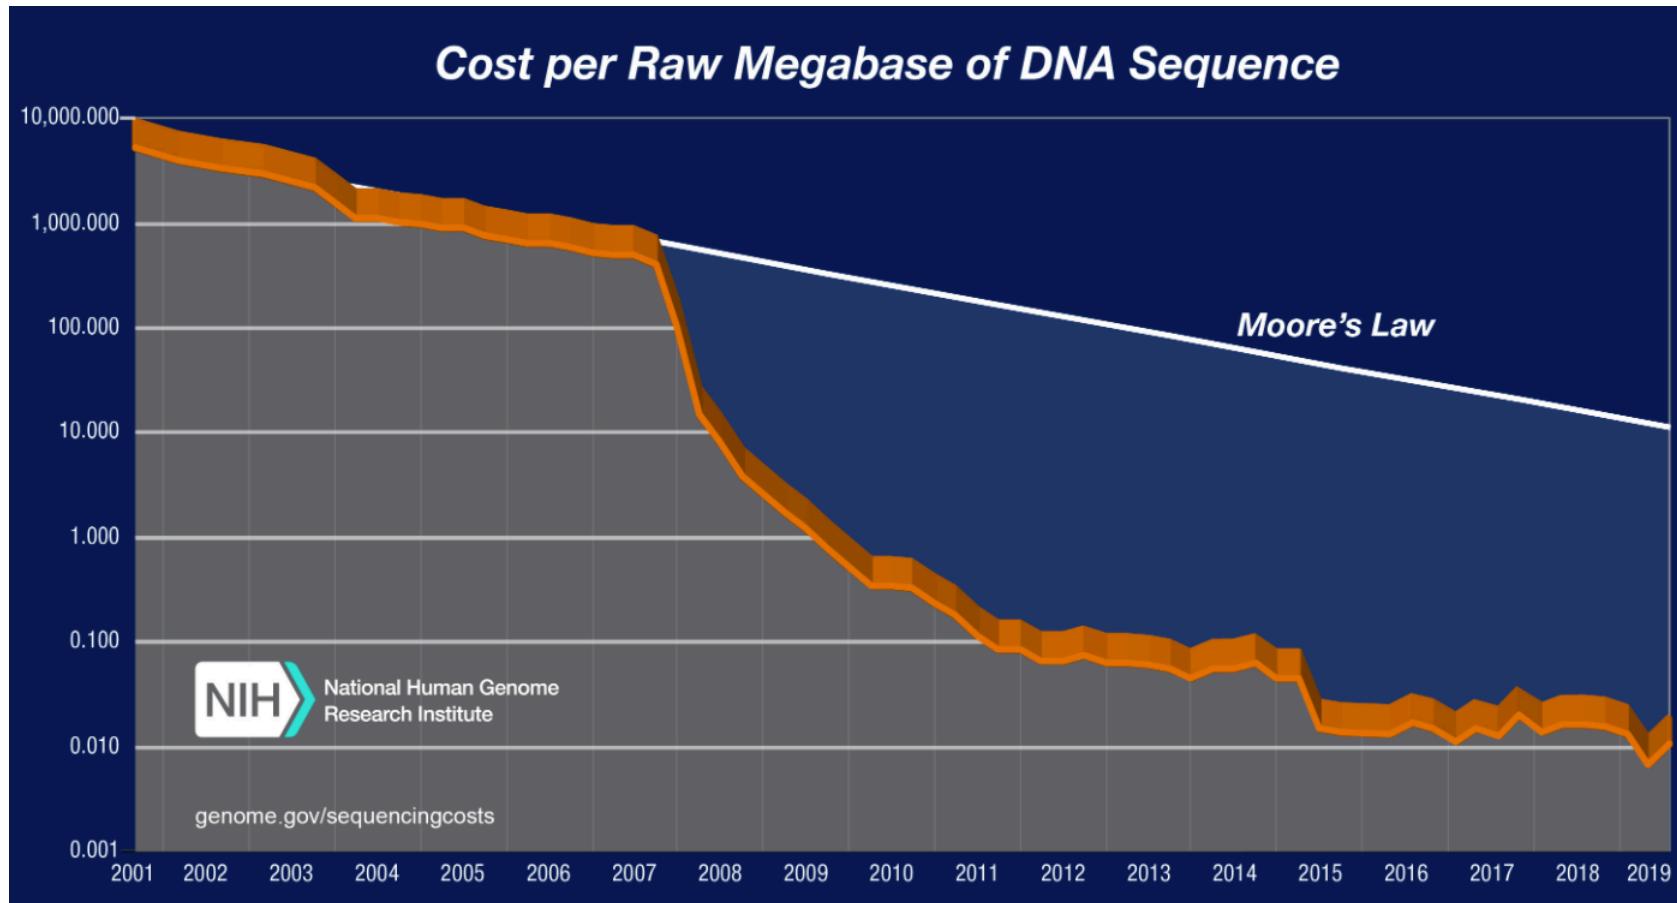

Common perception...

Reality..

The image shows a Mac OS X desktop with several open windows. At the top is the Dock with icons for Finder, Mail, Safari, and others. Below the Dock are two terminal windows. The left terminal window is titled 'Terminal' and contains command-line output for a bioinformatics pipeline, including commands like 'encode-atac-seq-pipeline' and 'zcat'. The right terminal window is titled 'ssh' and shows a command being run. Between the terminals is a genome browser window for Human hg38, specifically focusing on chromosome 7. The browser displays genomic tracks for genes like BRAF and variants like a74bab3c-39b7-4461-af0a-0a151. Below the genome browser is another terminal window titled 'ssh' with the command 'ssh -s ssh_to_dartfs_discovery.sh'. At the bottom of the screen is a file manager window showing a directory structure with files like 'hg38_annotiations.bed.gz' and 'hg38.blacklist.bed'. The overall environment suggests a scientific or technical workflow involving genome analysis and cluster management.

Data is getting cheaper & bigger

<https://www.genome.gov/about-genomics/fact-sheets/DNA-Sequencing-Costs-Data>

Complex analytics are playing a larger role

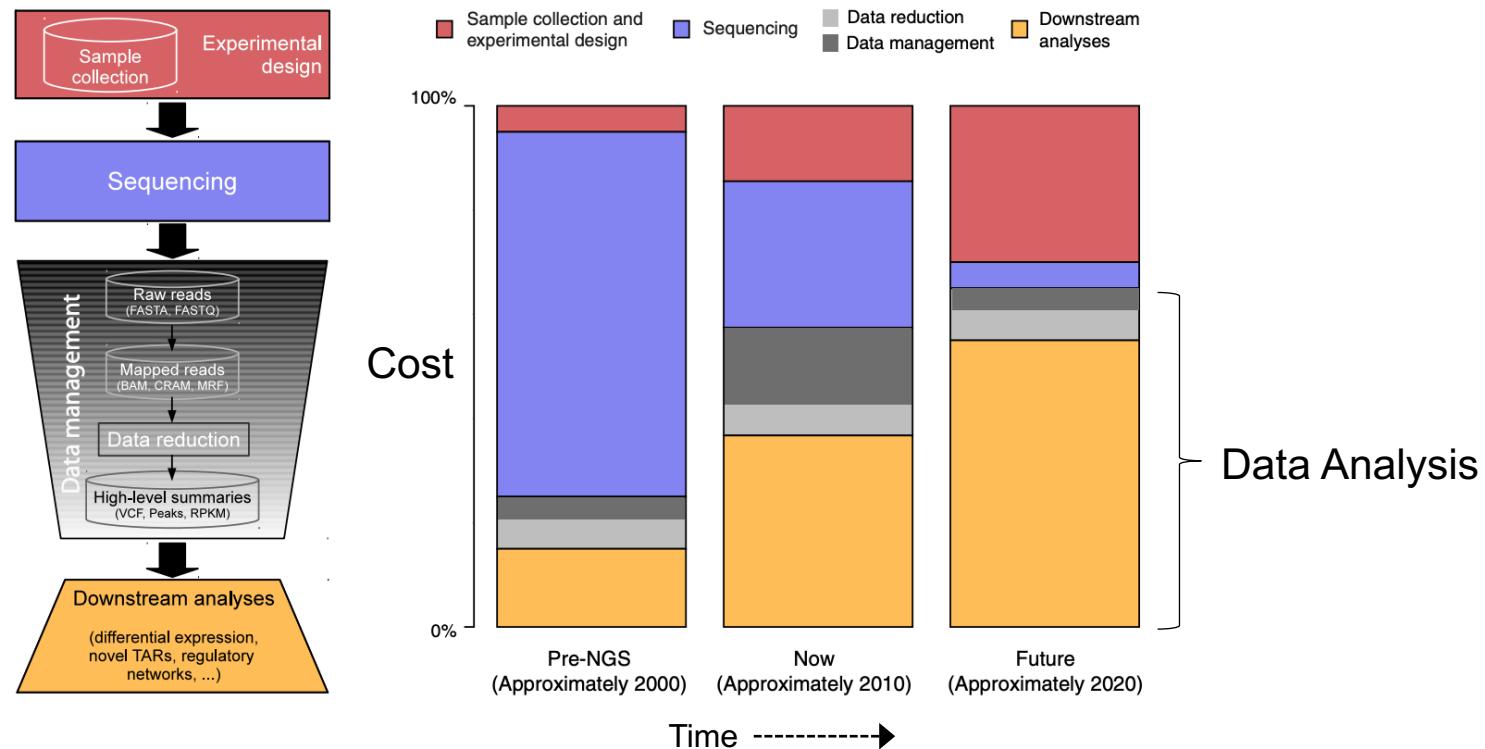

Sboner et al. *Genome Biology* 2011, 12:125
<http://genomebiology.com/2011/12/8/125>

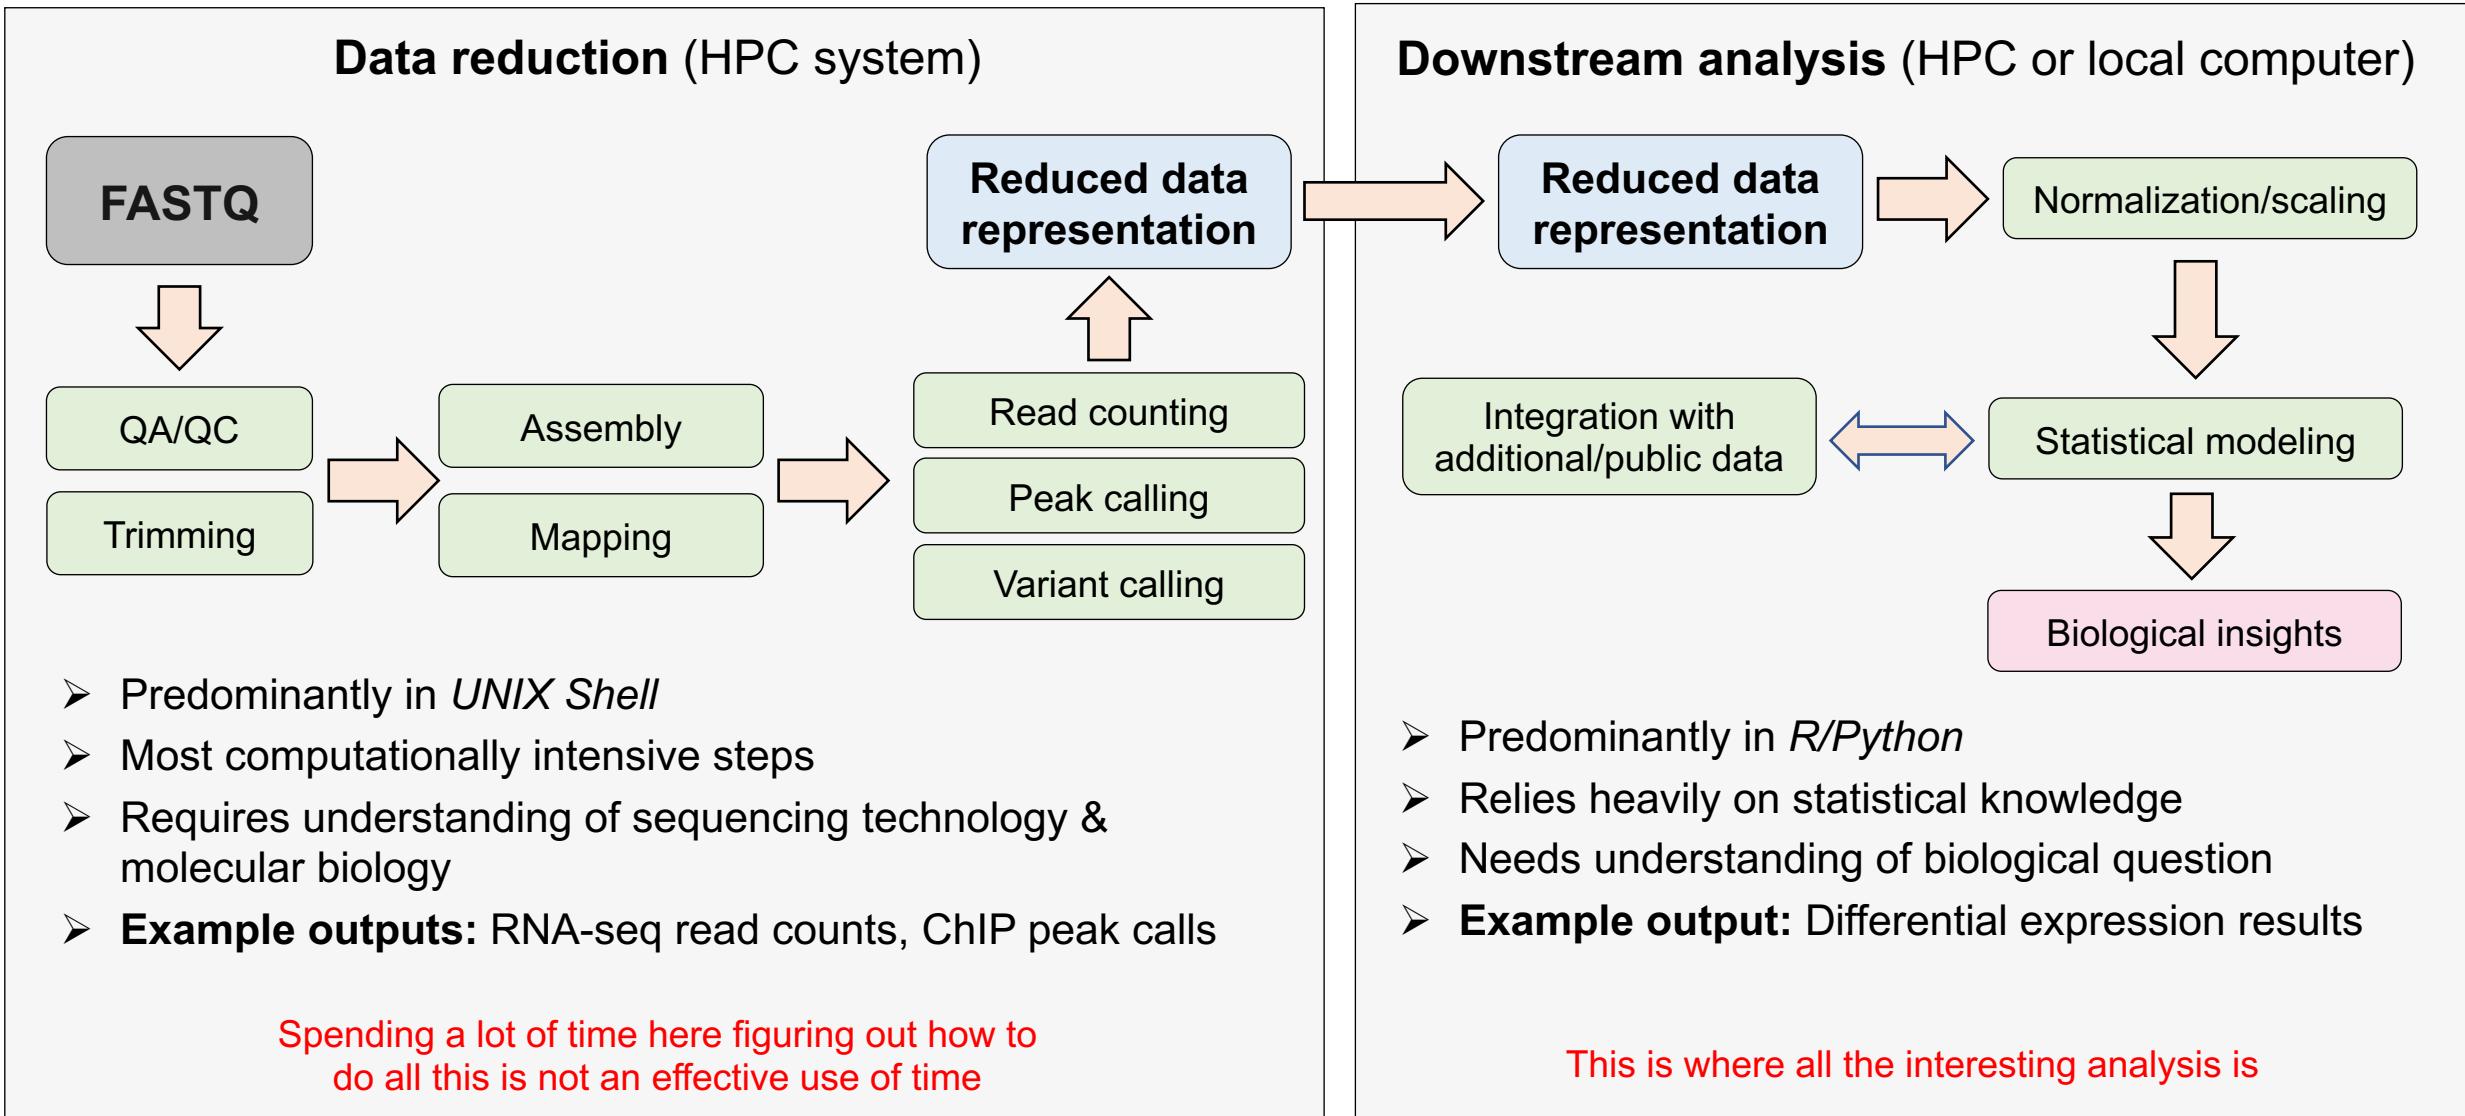

OPINION

The real cost of sequencing: higher than you think!

Andrea Sboner^{1,2}, Xinmeng Jasmine Mu¹, Dov Greenbaum^{1,2,3,4,5}, Raymond K Auerbach¹ and Mark B Gerstein*^{1,2,6}

Two major components of genomic data analysis

How is data reduction performed?

ssh connection to discovery

```
d41294d@discovery7:/dartfs-hpc/rc/lab/G/GMBSR_bioinfo/Labs/Cramer/filtered-analysis/trim/fastq
Last login: Fri Dec 11 12:06:57 on ttys001
The default interactive shell is now zsh.
To update your account to use zsh, please run `chsh -s /bin/zsh`.
For more details, please visit https://support.apple.com/kb/HT208050.
(base) [OwenW@vpn-two-factor-general-230-140-214 ~] $ sh ssh_to_dartfs_discovery.sh

[Scheduled maintenance]

Questions? Email Research.Computing@dartmouth.edu
===== Research Computing Notices =====
[12/21/20-12/22/20] [Cluster Maintenance] the Discovery cluster will be down starting Monday
12/21/20 through Tuesday 12/22/20 5PM EST. Jobs cannot be submitted or running during this time.

Run 'notice' for more details of any announcements above.

```

Line 40, Column 62

Tab Size: 4 Bourne Again Shell (bash)

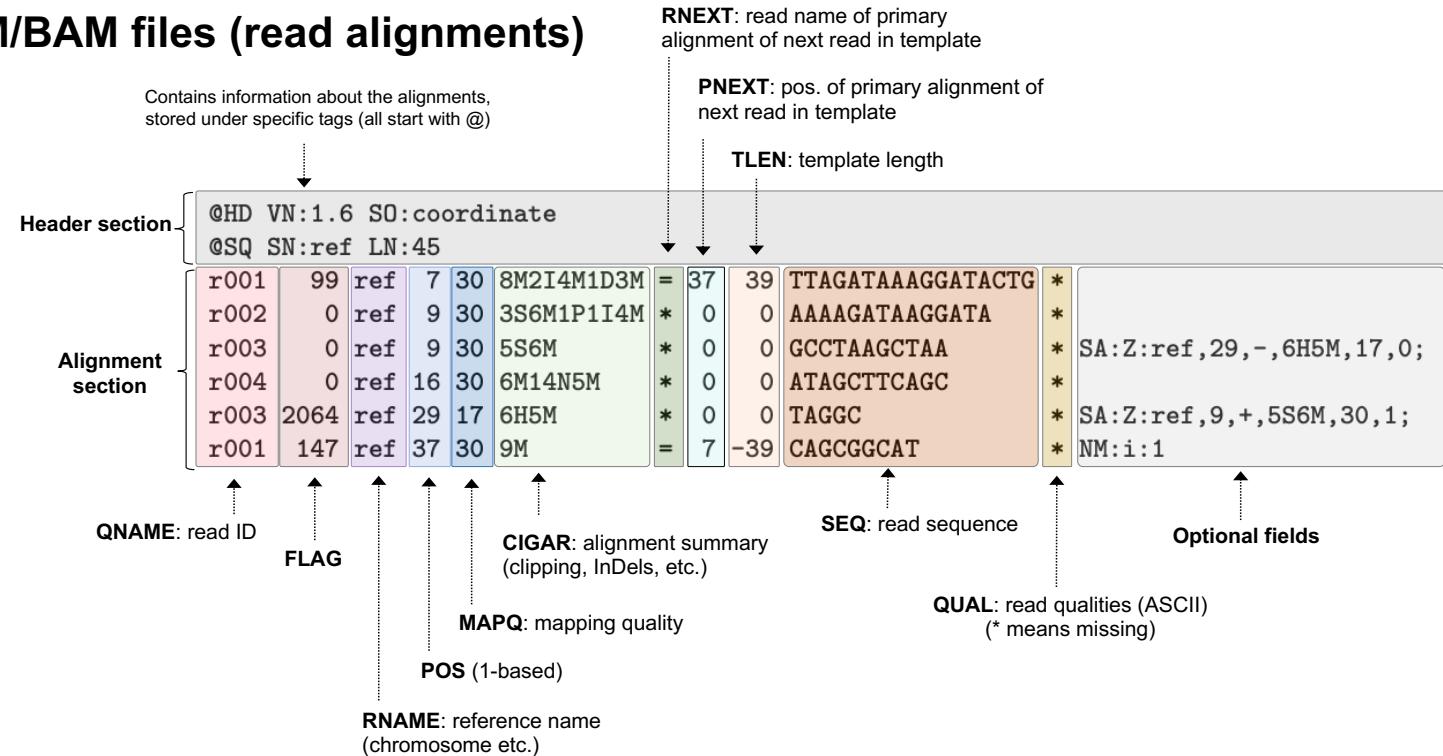

NGS data reduction uses many complex file formats

FASTQ files (raw sequencing reads)

```
@SRR1039508.1 HWI-ST177:290:C0TECACXX:1:1101:1225:2130 length=63
CATTGCTGATACCAANNNNNNNNCATTCTCAAGGTCTCCTCCCTACGGAATTACA
+
HJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJJHHHFFFFFD
```

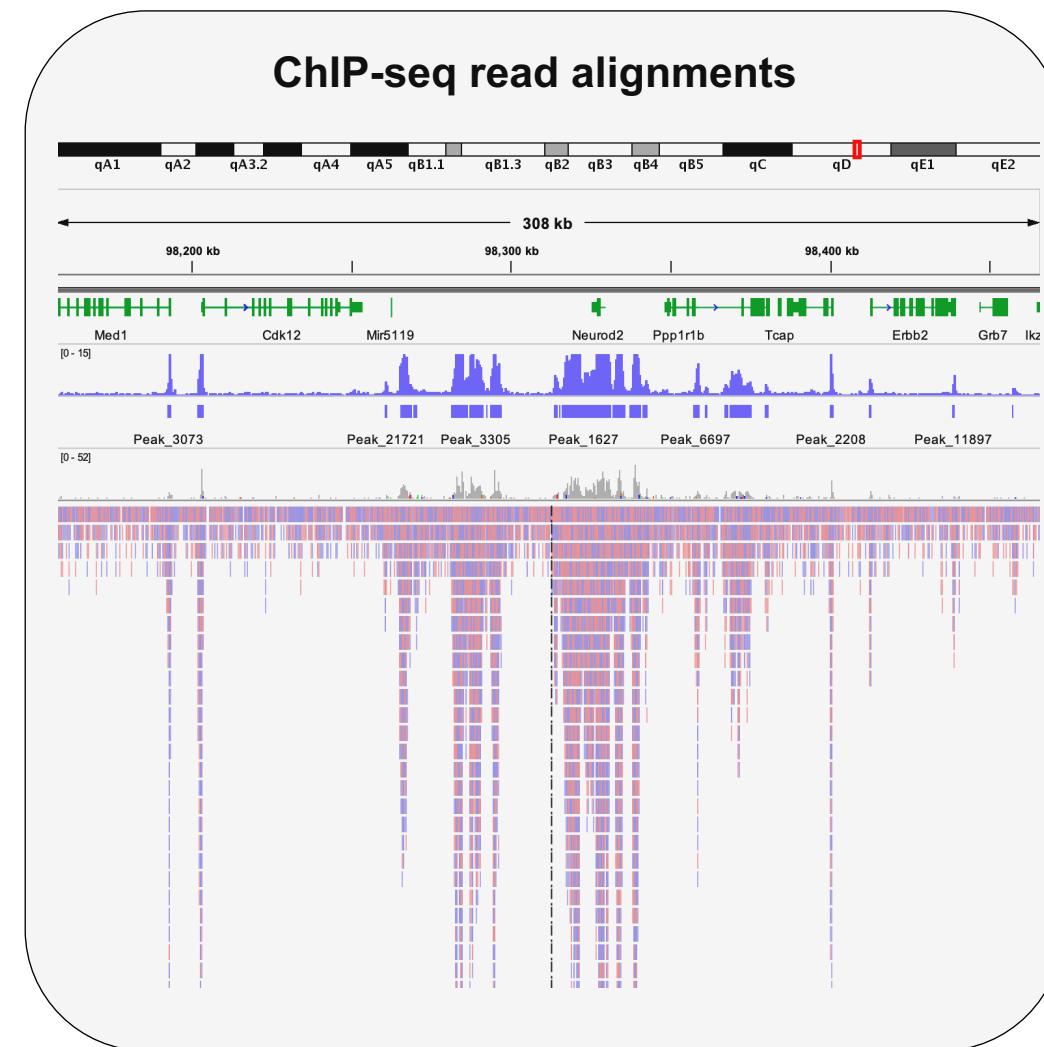

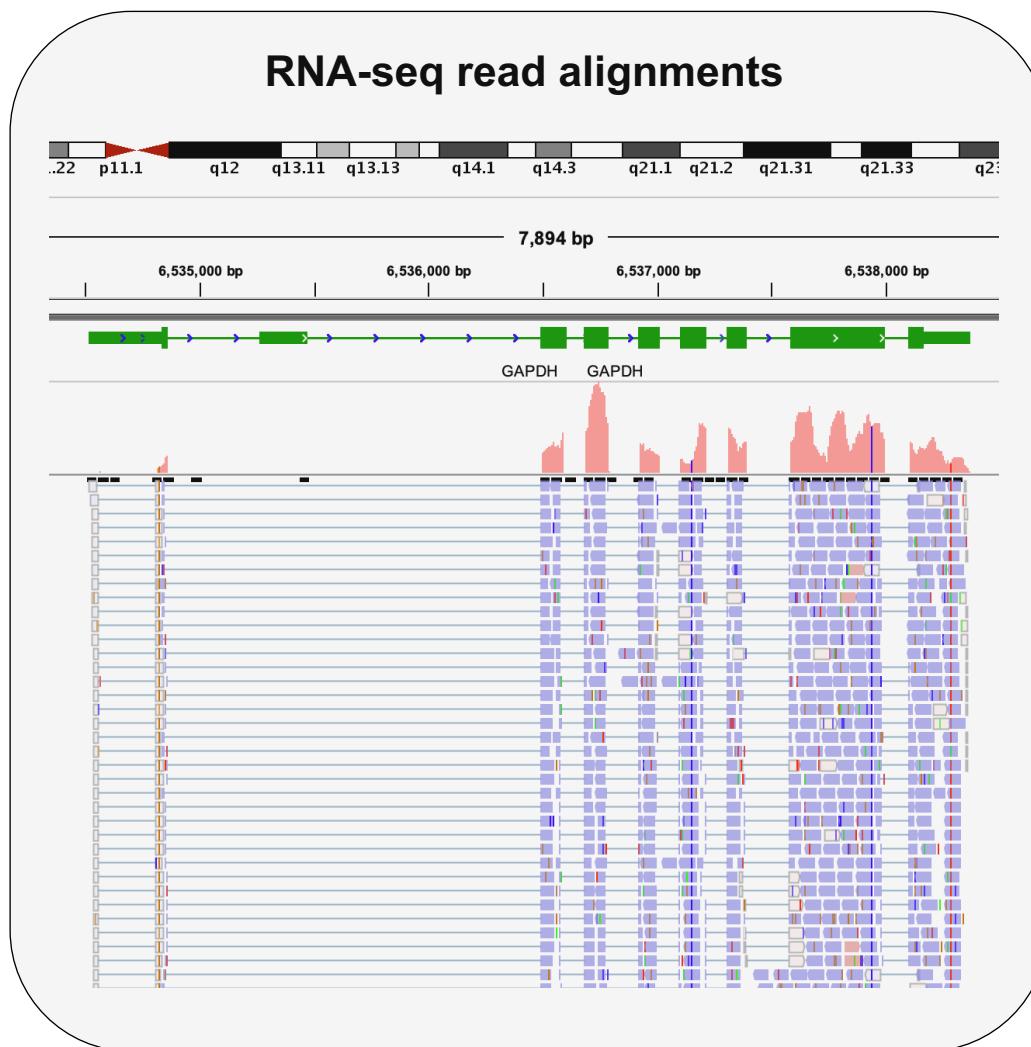

Line 1: Header line (read name)
Line 2: Base calls from sequencer
Line 3: Usually just a +
Line 4: Base quality scores

SAM/BAM files (read alignments)

- Many other file formats exist for storing specific types of data:
 - FASTA
 - GTF/GFF
 - VCF
 - MAF

NGS data look very different depending on workflow

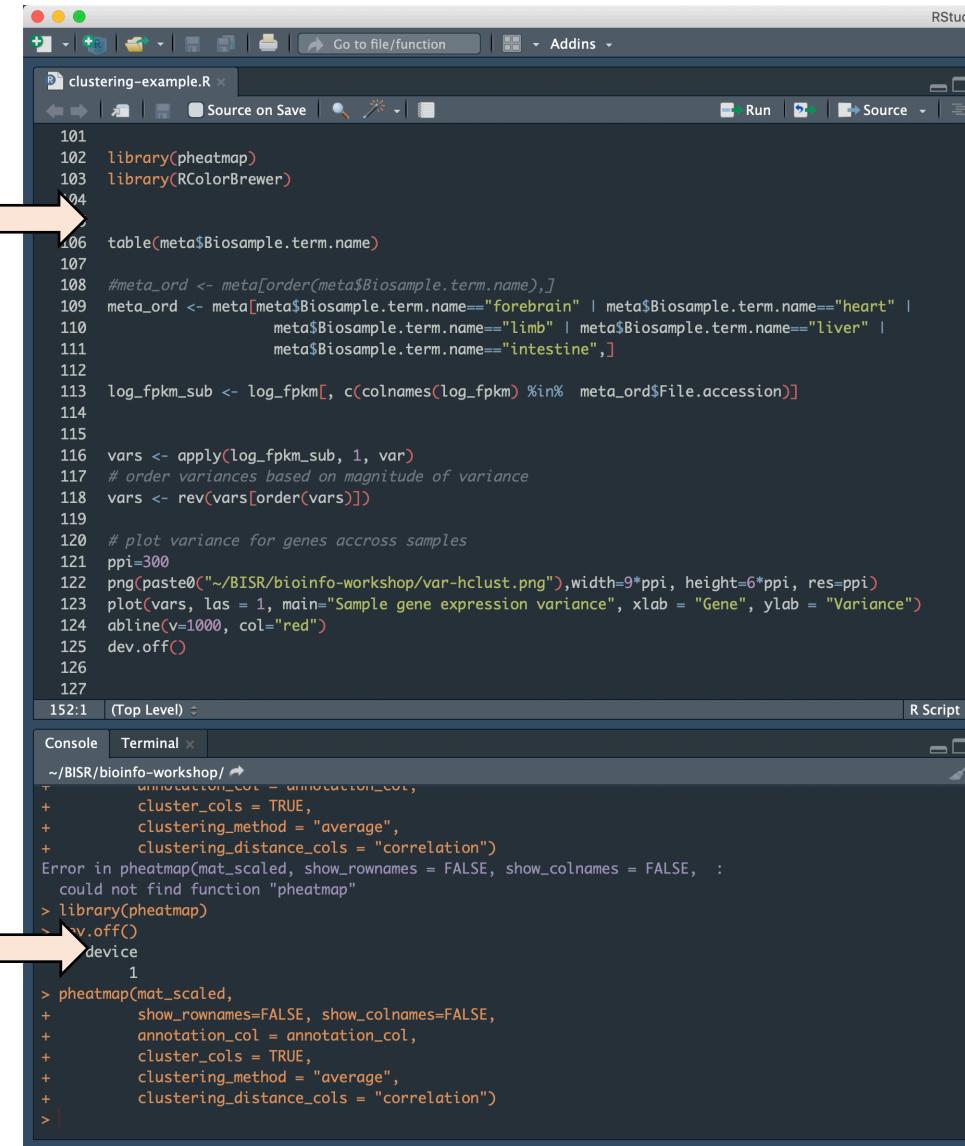

Analysis pipelines, quality control metrics, and possible hypothesis inherently differ

How is downstream analysis performed?

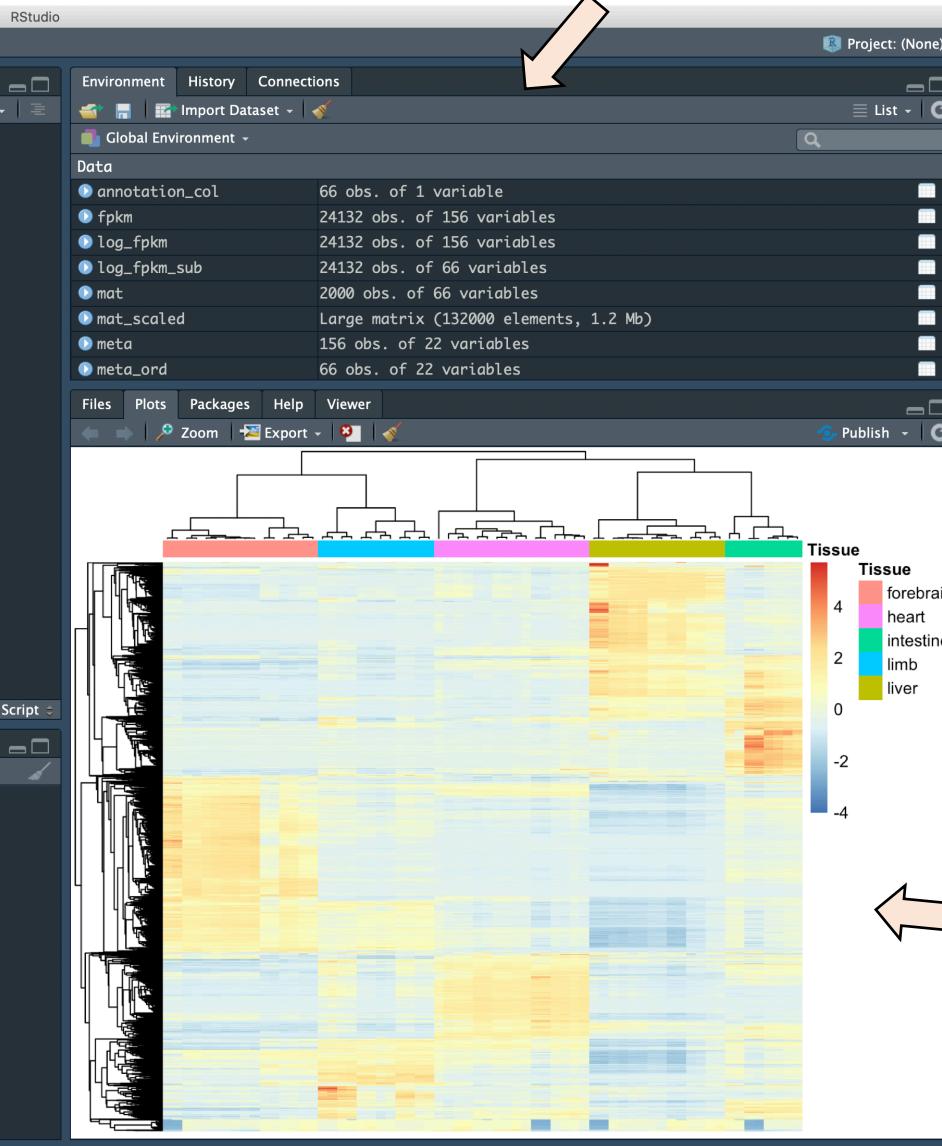

- R/python or other software that allow statistical programming

Scripting window

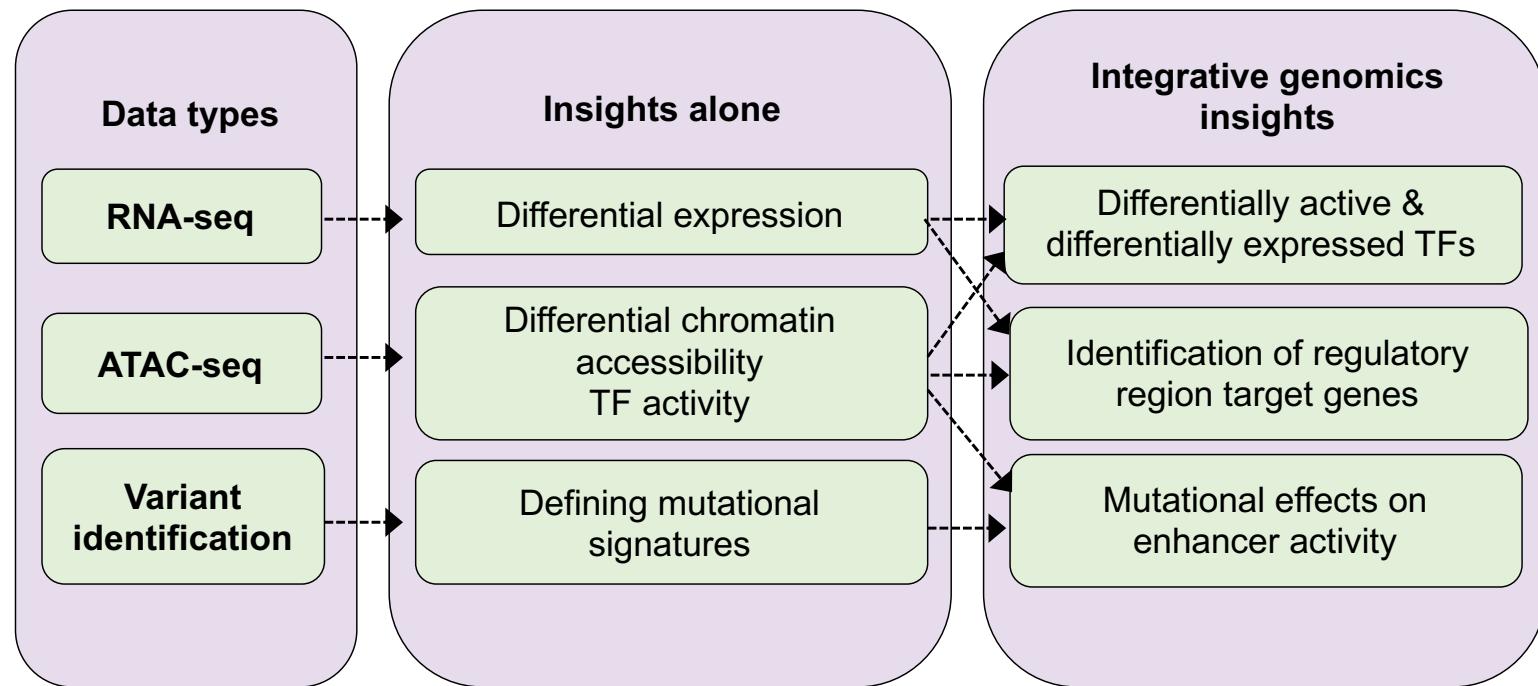

```

```

Console

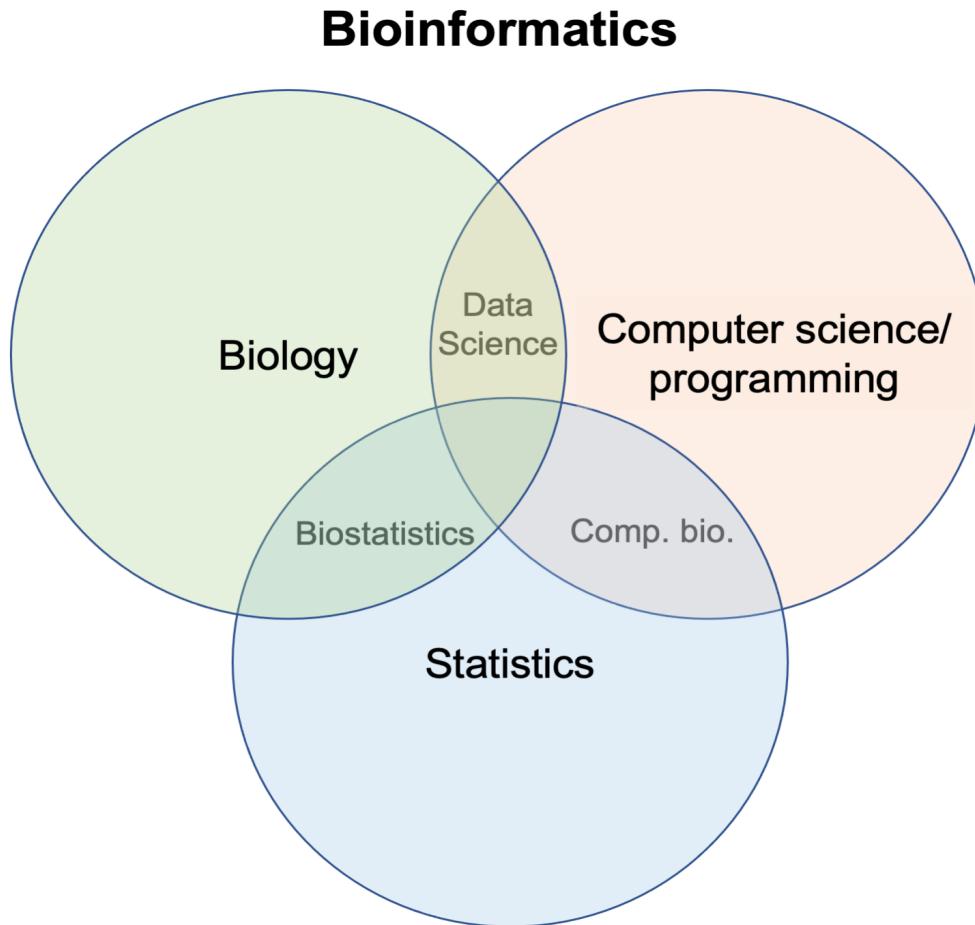

Advanced downstream analysis: Integrative genomics

- Leveraging data integration across more than one ‘omics platform, to reveal insights not possible with each data type alone
- Requires some creativity

- You may not have generated each dataset in-house (e.g. combine in house & public data)

Skills sets for bioinformatics

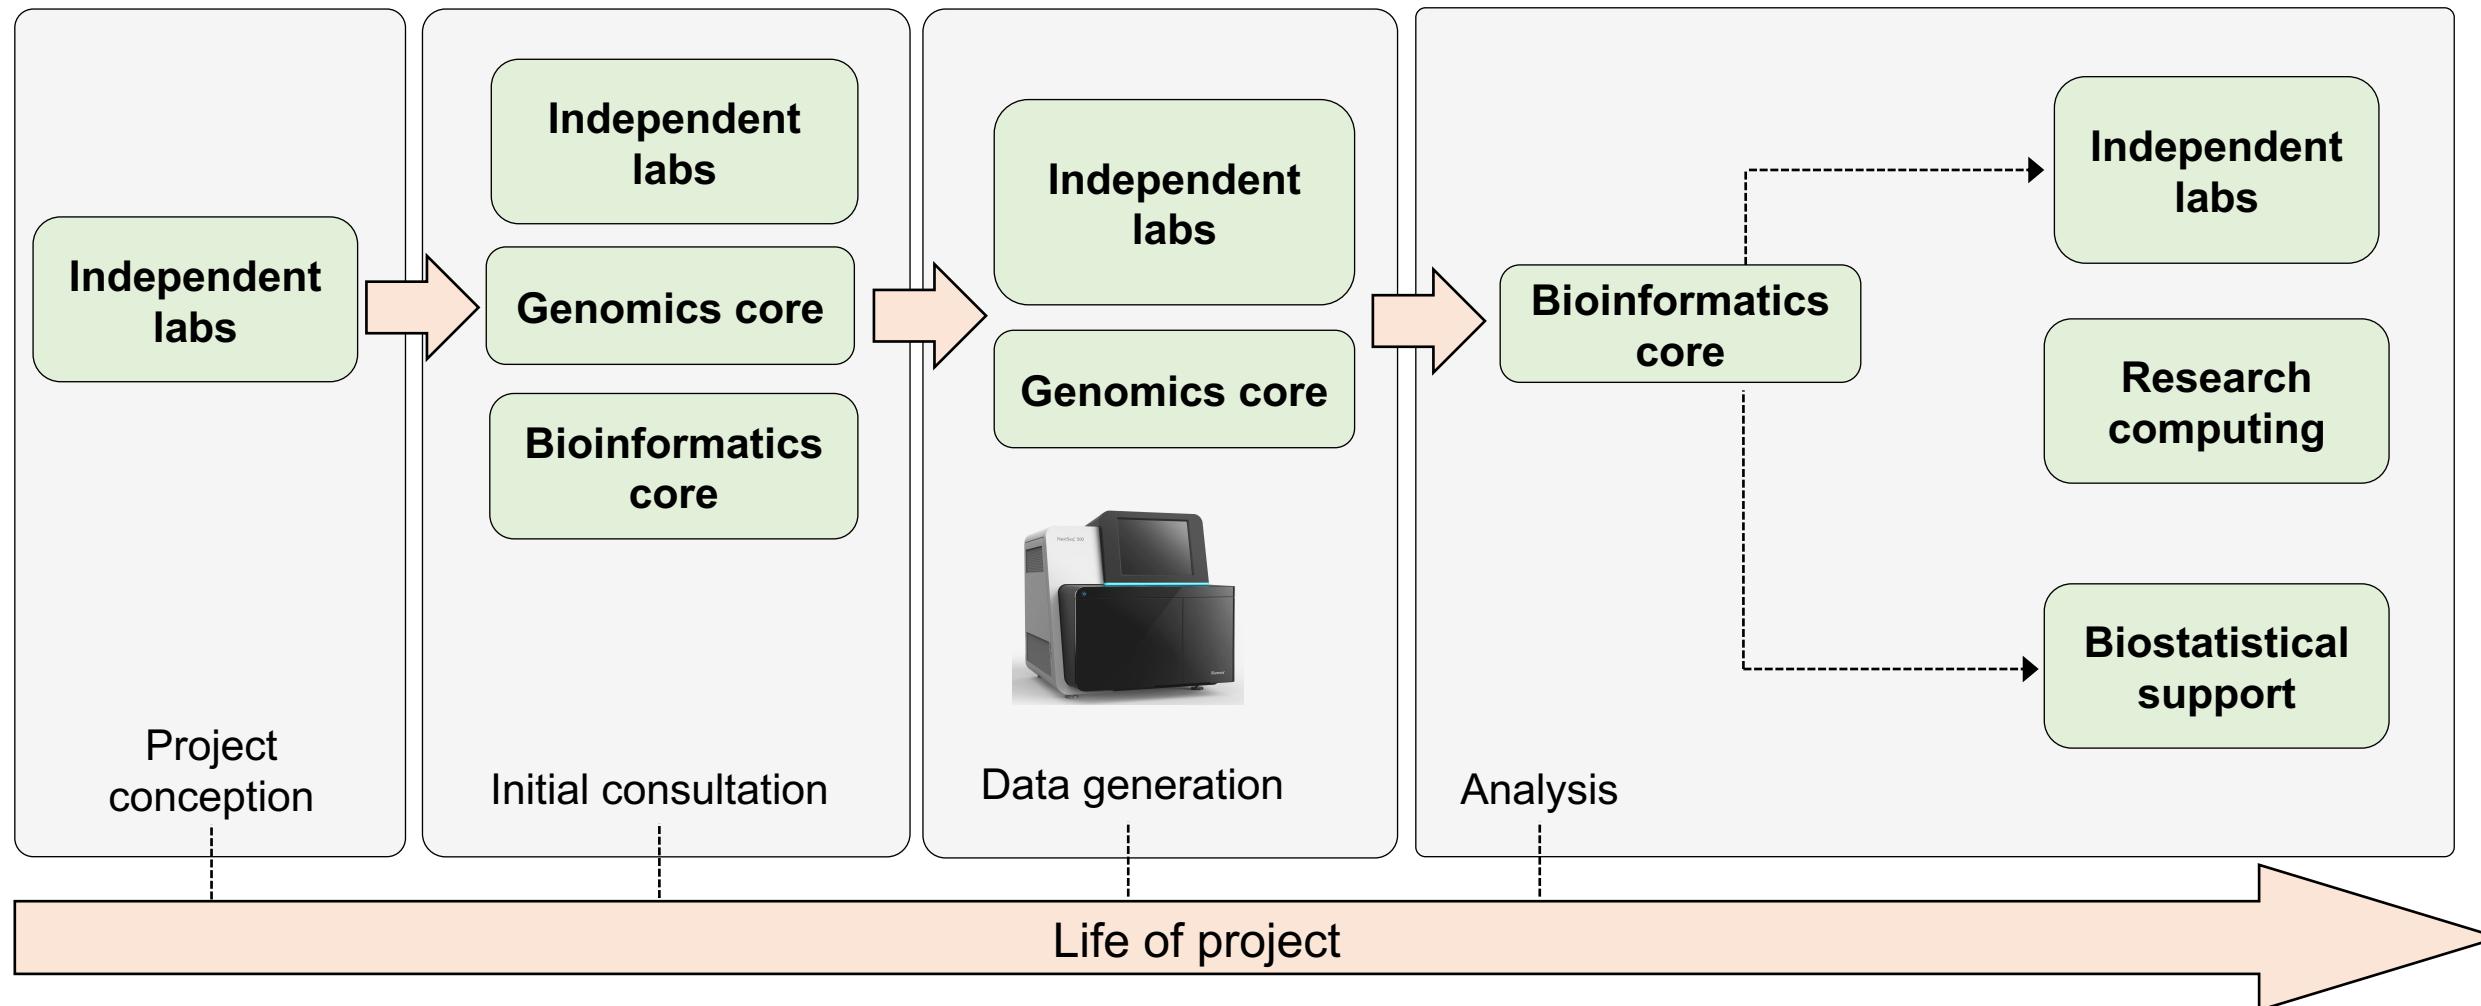

- Bioinformatics requires an interdisciplinary skill set
- Emphasis of skill set depends on types of analysis you intend to perform
- Familiarity with multiple experimental & analytical frameworks
- Working knowledge of statistics to understand and apply methodology

When to start thinking about analysis?

- Ideally, before data generation..

Summary

- **Bioinformatics:** the use of complex computational & statistical approaches to analyze large and diverse collections of biological data
- **NGS bioinformatics involves two major steps: data reduction & downstream analysis**
- **Data reduction** involves producing a reduced representation of the dataset from which biological insights can be extracted
- **Downstream analysis** involves fitting statistical models to the data to generate insights
- **Bioinformatics** requires an interdisciplinary skill set
